26.08.2010

## Denmark (Baltic Sea Area) (Nielsen et al. 1996)

- › Number of macroalgae species 375
  - › Rhodophyta 160
  - › Phaeophyceae 125
  - › Chlorophyta 90
- › Ratio (R:P:C) 1.78 : 1.39 : 1.00

DK R:P index ~ 1.28

Cold temperate regions: R:P index ~ 1.1  
Tropical regions: R:P index ~ 4.3 (Luning 1990)

26.08.2010

## Conditions of challenge in Denmark

- › Lack of suitable substratum
  - › Relatively small and patchy occurrences of natural seaweed stocks – high work load to get "feed" stock
  - › Farming seaweeds make sense

## Salinity

## The impact of decreasing salinity

- › Submergens

## The impact of decreasing salinity

### Decline in species number/distribution

- › Rule of thumb: decrease of 10 psu  $\Rightarrow$  the number of red algal species is halved

Nielsen et al. 1995

## The impact of decreasing salinity

- › Depauperation of thallus

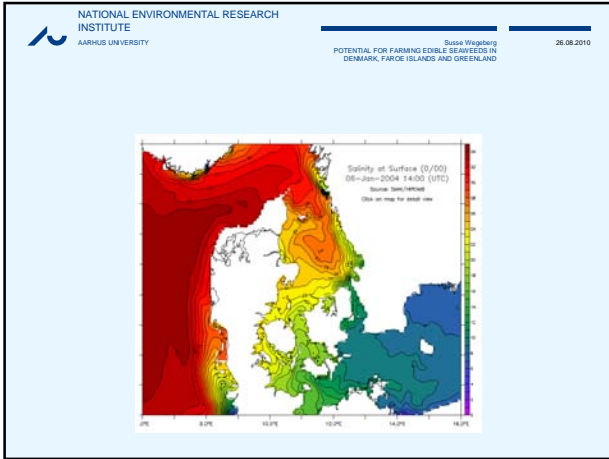

Fig. 3.9. *Delesseria sanguinea* from different salinity regimes. A. Grolle Grund, ca 20 psu. B. Mons Klint, ca 10 psu. Leg. & det. Aase Kristiansen.

### Species cultivated in Denmark (on trial)

- › *Ulva lactuca* L.
- › *Chondrus crispus* Stackh.
- › *Saccharina latissima* (L.) C.E.Lane, C.Mayes, Druehl & G.W.Saunders

## Marifood Aps.

Photos: Marifood Aps.

- › Relatively deep location
- › Early on-grow in sea
- › Manipulated sporulation

## Iodine

In *S. latissima* from Marifood Aps. the iodine content is app. 10 % of the iodine in Chinese kelp

Iodine intake limit:  
1100 µg day<sup>-1</sup>

TABLE 2. COMPARISON OF SEAWEED IODINE BY GENUS, GEOGRAPHIC LOCATION, AND STUDY

Seaweed origin	This study	Lee et al. (2011)	Hou and Yan (2012)	Aponte et al. (2011)	Van Notten et al. (2011)
	µg/g	UK	China	France	British Columbia
<i>Arame</i>	580	714*			600
<i>Chlor</i>	72	44			
<i>Enter</i>	629	395			426
<i>Kelp granulos</i>	8165	62			815
<i>Kelp (subsp.)</i>	1542*	2020	3040	532*	2110
<i>Enter</i>	28	43	36		17
<i>Wakame</i>	661*	161*	1571		385
<i>Alaria</i>					102
					151

From Teas et al. (2004)

## Edible seaweed species in Denmark

### Species farmed in DK

- › *Ulva lactuca* L.
- › *Chondrus crispus* Stackh.
- › *Saccharina latissima* (L.) C.E.Lane, C.Mayes, Druehl & G.W.Saunders

### Potential species?

- › *Codium fragile* (Suringar) Har.
- › *Osmundea truncata* (Kütz.) K.W.Nam & Maggs
- › *Palmaria palmata* (L.) Kuntze
- › *Porphyra umbilicalis* (L.) Kütz.

## Faroe Islands

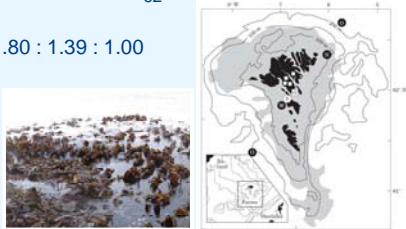

- › Challenges
- › Native edible species
- › Cultivation performed
- › Other potential species
- › Methods

## Faroe Islands (Tittley et al. 2005)

- › **Number of macroalgae** 260
  - › **Rhodophyta** 112
  - › **Phaeophyceae** 86
  - › **Chlorophyta** 62
- › **Ratio (R:P:C):** 1.80 : 1.39 : 1.00
- › **R:P index:** 1.3

## Challenges - Legislation

### ISA - Infectious Salmon Anaemia

1984: recognised for the first time in Norway  
1996: outbreaks in Canada  
1998: outbreaks in Scotland  
2000: outbreaks in the Faroe Islands  
Outbreaks in Chile

26.08.2010

## Elongation rate of *Alaria esculenta*

- › **2 cm d<sup>-1</sup>**
- › **Ca. 1 m season<sup>-1</sup>**

Mortensen et al. 2005

## Potential species: *Palmaria palmata*

Cultivation has been successfully achieved on ropes and in tanks:

- › Ireland (Edwards 2007)
- › Germany (Sylter Algenfarm GmbH & Co.KG)

## *Porphyra umbilicalis*

- › Research in cultivation on neutral spores in Maine, USA

- › Seeding nets with neutral spores of the red alga *Porphyra umbilicalis* (L.) Kützinger for use in integrated multi-trophic aquaculture (IMTA) (Blouin et al. 2007)

## Greenland

- › Challenges
- › Native edible species

NATIONAL ENVIRONMENTAL RESEARCH INSTITUTE  
AARHUS UNIVERSITY

Susanne Wiggberg  
POTENTIAL FOR FARMING EDIBLE SEAWEEDS IN DENMARK, FAROE ISLANDS AND GREENLAND  
26.08.2010

## Greenland (Pedersen 1976)

- › **Number of macroalgae** 183
  - › Rhodophyta 48
  - › Phaeophyceae 80
  - › Chlorophyta 55
- › **Ratio (R:P:C):** 1.00 : 1.67 : 1.15 **R:P index:** 0.6

NATIONAL ENVIRONMENTAL RESEARCH INSTITUTE  
AARHUS UNIVERSITY

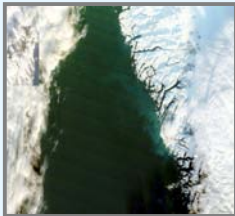

Susanne Wiggberg  
POTENTIAL FOR FARMING EDIBLE SEAWEEDS IN DENMARK, FAROE ISLANDS AND GREENLAND  
26.08.2010

- › Short season
- › Low temperatures
- › Ice

Total extent = 15.2 million sq km

- › Early on-grow in sea
- › Deep location for on-grow
- › Open water areas/polynias
